PROFILE

Data Scientist & ML Engineer with MSc from TU/e, specializing in production-ready AI systems for agriculture, manufacturing, and automotive sectors. Led development of Loopit.ai (vehicle damage automation platform) and deployed RL-based egg-sorting calibration reducing false negatives by 50% (€25K savings, 15K eggs saved annually). Expert in Python, deep learning (YOLO, CodeT5), data pipelines (SQL Server, Azure, Streamlit), and leading cross-functional teams to deliver scalable, impactful solutions.

EXPERIENCE

Junior Data Scientist, Vencomatic Group 11/2025 – Present | Eersel, Netherlands
- Build data pipelines and interactive dashboards using Python, SQL Server, and Streamlit to analyze poultry production data and monitor KPIs.
- Perform time-series analysis and anomaly detection on Azure databases to enhance egg weight monitoring and operational insights.

Co-Founder & CTO, Loopit.ai 02/2024 – present | Eindhoven, Netherlands
- Led end-to-end development of Loopit, an AI-driven platform automating vehicle damage detection, localization, and cost estimation using deep learning and computer vision.
- Designed system architecture (image preprocessing, YOLO-based models, license plate recognition) and managed a 12-member team handling ML training, backend integration, and UI deployment.

Master's Thesis Intern, Vencomatic Group 12/2024 – 08/2025 | Eersel, Netherlands
- Developed and deployed a reinforcement learning-based calibration system for automated egg-sorting, reducing false negatives by over 50% (~15,000 eggs saved, ~25,000€ annual savings, ~1,440 kg CO₂e avoided).
- Integrated sensor, classifier, and machine data into real-time inspection pipelines with a semantic knowledge graph, improving traceability, system accuracy, and explainability.

Research Intern, William & Mary University 09/2024 – 12/2024 | United States
- Optimized LLM prompts for code generation by adapting gisting and prompt masking techniques to tasks using models like CodeT5.
- Benchmarked model performance on CodexGlue datasets (Java, Python) using Codereval, CrystalBLEU, and Pass@k to evaluate accuracy and semantic quality.

Research Intern, Bergische Universität Wuppertal 02/2022 – 05/2022 | Germany
- Developed and fine-tuned deep learning models using reinforcement learning and job-shop scheduling principles to optimize production planning in the AlphaMES aerospace project.
- Researched neural architectures for discrete and categorical data, translating technical findings into data-driven decisions for industrial automation.

Software Engineering Intern, Ingersoll Rand 10/2021 – 03/2022 | India
- Developed a Python-based dashboard with real-time data integration and modular pipelines for machine usage monitoring and reporting.
- Deployed solutions on Heroku and collaborated with global teams to ensure seamless adoption, documentation, and reproducibility of tools.

EDUCATION

MSc Computer Science & Engineering, Eindhoven University of Technology (GPA 7.12/10) 08/2023 – 08/2025 | Eindhoven, Netherlands

BTech Computer Engineering, Jamia Millia Islamia University (Grade - 8.54/10) 08/2019 – 07/2023 | New Delhi, India

SKILLS

Programming: Python, C, C++, Java, SQL, R, ReactJs, HTML, CSS, JavaScript

AI/ML Tools: TensorFlow, MLflow, PyTorch, Scikit-learn, Langchain, RAG, OpenCV, Keras, OpenPose

Technologies/Frameworks: Azure, AWS, Docker, Kubernetes, CI/CD, Git, Linux, GitHub, Streamlit, Django, PostgreSQL

Project Management: TU/e Bachelor's Project, Scrum Master (TA) – Led agile coordination for successful completion.

PROJECTS

Vehicle Proximity Alert using Computer Vision 05/2023
Real-time YOLOv4-tiny system detecting vehicles/pedestrians with audio warnings.

Text Localization & Digitization of Handwritten Form 11/2022
Developed a completely automated tool for recognizing handwritten content on image-based forms using **Tesseract OCR** & custom **CNN**

LANGUAGES

English: Native • **Hindi:** Native • **Dutch:** Beginner • **German:** Beginner

AWARDS

Winner, TU/e Innovation Challenge
Designed an RL-based EV fleet charging system for UPS.

Participant, IESE Business School
Represented TU/e in EuroTeQ cohort in Barcelona.

Media Feature, *Eindhovens Dagblad*

Presented a cashless festival bar system; featured in city press.

Winner, *EAI SI AI Incentive Award*

Built *Looplt.ai* , an AI claims dashboard for insurers; awarded €1,000.

EXTRACURRICULAR

Wanderers Cricket Club Oss, *Player*

Compete in KNCB league matches

06/2025 – Present

Universities of Mecklenburg-Western Pomerania, *International Summer Student*

Attended Sustainability Summer School presented by 7 Universities of the German State

08/2022

TUM.ai Makeathon, *Participant*

Developed AI prototype for **SIEMENS** under 48 hours in makeathon by **TU Munich** AI club

04/2022

Goethe Institut India, *Student*

Completed 3-month A1 Level German course

11/2021 – 01/2022

Ruhr-Universität Bochum, *International Summer Student*

Attended Engineering Summer School on Industry 4.0 funded by DAAD

07/2021 – 08/2021

Enactus JMI, *Social Worker*

Organized community service initiatives and sustainability projects for social impact.

10/2019 – 09/2020
